

Creator Growth Portfolio for ElevenLabs

Building creator communities around AI-powered voice, audio, image, video, and storytelling tools.

POSITIONING

AI creative tools don't replace creators. They expand what creators can make, test, and imagine.

My background sits at the intersection of storytelling, digital culture, AI content evaluation, audience analysis, and community-driven content. I understand how creators think, how audiences respond, and how new tools become part of creative workflows — when they feel useful, exciting, and genuinely easy to adopt.

Workshop & Education

Growth Experimentation

Reporting & Feedback Loops

ElevenLabs is becoming creative infrastructure.

Voice, music, image, and video are no longer separate creative lanes. Creators need tools that help them move faster without losing emotional quality. ElevenLabs can become part of the daily workflow for storytellers, marketers, educators, podcasters, video creators, agencies, and brands — across every market and language.

1

Curiosity

Turn first exposure into a first use moment

2

Habit

Turn first use into a repeatable creative workflow

3

Teaching

Turn repeat users into educators and demonstrators

4

Advocacy

Turn teachers into community advocates and ambassadors

📌 The strongest creator communities are built when users don't just use the product — they start showing others what's possible.

Sample AI Creator Workflow

How I would demonstrate practical use of ElevenLabs in a creator workshop or community activation. A short-form creator wants to turn a written script into a polished, narrated video.

Each stage maps directly to a teachable moment in a live workshop. The workflow becomes a repeatable tutorial that other creators can copy, remix, and share — turning a single session into compounding community value.

 This is a sample workflow designed to show how creator education can turn product features into practical, lasting creative habits.

Creator Segments I Would Prioritize

The highest-value creators aren't only those with the biggest audiences. They are the ones who can show others what's possible — and whose workflows others want to replicate.

1

Storytelling Creators

Youtubers, podcasters, documentary makers, educators. Core needs: narration, voice tone, translation, emotional depth, accessibility.

2

Marketing & Agency Creators

Social teams, UGC agencies, brand content editors. Core needs: faster asset production, voiceover testing, multilingual campaigns.

3

AI-Native Creators

AI filmmakers, prompt artists, indie builders. Core needs: advanced workflows, public recognition, community credibility, technical depth.

4

Global & Multilingual Creators

Creators with cross-language audiences. Core needs: dubbing, localization, culturally sensitive adaptation, accessibility.

From Tool Adoption to Community Momentum

Community growth compounds when creators become educators. Every stage of this flywheel reinforces the next — turning individual usage into a self-sustaining creative movement.

Workshop Concept: From Script to Voice

A practical 60-minute creator education session designed to drive adoption among video creators, podcasters, educators, and social storytellers. Every minute is structured to produce something tangible.

Session Structure

O1

5 min — What makes voice emotionally believable?

O2

10 min — Live demos: 3 voice tones compared

O3

15 min — Participants write or bring a short script

O4

15 min — Create voiceover variations in real time

O5

10 min — Group debrief: what worked and why

O6

5 min — Next steps, community challenge, and follow-up

Success Metrics

- Workshop signups and attendance rate
- Completed creative outputs per session
- Shared content post-workshop
- Repeat platform usage within 7 days
- Qualitative feedback and creator sentiment
- Product questions and friction points captured

✔ Each participant leaves with a narrated asset or a fully replicable workflow they can use independently.

ElevenLabs Creator Circle

A structured ambassador program for creators who actively use ElevenLabs — and who can educate, inspire, and expand the community. Prioritizing quality of creative output, teaching ability, product curiosity, and diversity of niches.

Program Pillars

- Monthly creator challenges
- Early feature access
- Creator spotlights & case studies
- Community-led workshops
- Product feedback loops
- IRL meetups: NYC, LA, SF, and key creative hubs

Selection Criteria

- Quality of creative output
- Teaching ability and clarity
- Consistency and follow-through
- Community influence and reach
- Diversity of creative niches
- Product curiosity and feedback value

Success Metrics

- Active creator participation
- Creator-generated content volume
- Social mentions and referrals
- Feature adoption rates
- Feedback quality and volume
- Long-term usage retention

How I Would Track, Learn, and Scale

Community reporting should help Product, Growth, and Marketing understand what creators actually need next — not just what the numbers say, but what creator language reveals about friction, excitement, and momentum.

Weekly Pulse

- Creator conversations
- Community activity signals
- Workshop signups
- Product feedback themes
- Creator questions and objections

Monthly Review

- Active creator cohorts
- Event attendance and retention
- Feature adoption signals
- Top use cases and friction points

Days 1–30: Listen & Map

Audit creator use cases, map segments, identify friction points, and build a baseline understanding of the community landscape.

Days 31–60: Pilot & Test

Launch the first workshop format, test outreach sequences, and identify top ambassador candidates from early community interactions.

Days 61–90: Scale & Systematize

Scale the strongest format, launch the Creator Circle pilot, and establish a formal product feedback loop with actionable reporting cadence.

📌 Numbers show movement. Creator language explains why it happened.

Why I Fit Creator Community Growth

I combine storytelling instincts, AI fluency, audience analysis, and community understanding. My background across journalism, cultural insight, social content, AI evaluation, and entertainment analysis gives me a strong ability to understand how people adopt new tools — and how creative communities build trust over time.

Human Understanding of Creators

I know how creative people think, what motivates adoption, and what kills momentum. That empathy drives every community decision.

AI Fluency & Experimentation

I work with AI creative tools hands-on. I can demo, explain, and contextualize features for creators at every skill level.

High Ownership & Adaptability

I operate with urgency and structure. I can build from zero, adapt quickly, and deliver work that is concrete, reportable, and scalable.

Community-First Thinking

Workshops, programs, feedback loops, and ambassador structures are not tactics — they are systems designed to compound creator trust over time.

Creators don't adopt tools because they are powerful. They adopt tools when they can see themselves making something better with them.
